Education

University of the Pacific, Stockton, CA May 2026
Master of Science in Computer Science

APJ Abdul Kalam Technological University, Kerala, India March 2023
Bachelor of Technology in Computer Science and Engineering

Technical Skills

Programming Languages:	Python, C++, JavaScript, TypeScript, MATLAB, Bash/Shell Scripting, SQL, HTML, CSS
Machine Learning & AI:	TensorFlow, PyTorch, Scikit-learn, YOLOv5, ResNet-50, LLMs, RAG, NLP, Text Classification, Sentiment Analysis, Zero-Shot Learning, Toxicity Detection, BERTweet, HateBERT, DistilRoBERTa, DNN, VADER, TextBlob, SHAP, LIME, Hugging Face Transformers, OpenAI API
Databases & Data Engineering:	MongoDB, PostgreSQL, Redis, ClickHouse, ETL Pipelines, Data Warehousing, Incremental ETL, Metadata Lineage
Backend, Tools & Frameworks:	Flask, FastAPI, Node.js, Express.js, Next.js, Streamlit, REST APIs, Authentication Systems, ROS/ROS2, AWS Lambda, Docker, OpenCV, Jupyter Notebook, VS Code, Git/GitHub, CUDA, JetPack SDK
APIs & Data Sources:	Reddit API, Twitter/X API, YouTube Data API, Yahoo Finance, NewsAPI, Finnhub, Google Cloud APIs, OpenWeather API
Robotics & Hardware:	NVIDIA Jetson, Jetson Orin Nano, LiDAR, ZED Stereo Cameras, IMUs, Sensor Fusion, Raspberry Pi, Arduino, Drones, Embedded Systems
Cybersecurity:	Network Security, Ethical Hacking, Vulnerability Scanning, Penetration Testing, Cryptography, Secure API Integration, Cloud Security Principles
Data & Visualization:	Pandas, NumPy, Matplotlib, Seaborn, Plotly, Chart.js, Recharts, WordCloud, Power BI, Tableau, Excel Analytics, Interactive Dashboards
Systems & Terminal Skills:	Linux (Ubuntu), Embedded Linux, NVIDIA Jetson Orin Nano, JetPack SDK, ROS 2 Humble, colcon, CMake, Docker (ARM64), CUDA setup, SSH/SCP, systemctl, journalctl, OS flashing, system debugging

Startup Experience

- **Co-Founder & Software Engineer** May 2025 – Present
Stock Crusher (GenAI Trading Platform)
 - Built [Stock Crusher](#), a GenAI-powered autonomous trading platform integrating multi-source sentiment (Reddit, news) with LLM-based reasoning to generate real-time BUY/SELL signals and portfolio insights.
- **Co-Founder & Software Engineer** October 2025 – Present
Meal Muse (AI Recipe Assistant)
 - Developed [Meal Muse](#), a full-stack AI recipe assistant with SwiftUI iOS client and FastAPI/Node.js backend, integrating OpenAI-based generation, PostgreSQL caching, and secure authentication (Apple, Google) for personalized recommendations.

Graduate Research Assistant – University of the Pacific

- *Dr. Solomon Berhe* May 2025 – May 2026
 - Conducted sentiment trajectory analysis on 324+ Reddit discussions using VADER and REST APIs, modeling author vs community dynamics with divergence and trend metrics.

- Built a scalable data pipeline with filtering, annotation, and validation workflows, incorporating confusion matrix evaluation; **manuscript in preparation for conference submission (July 2026)**.
- *Dr. Dongbin Lee* *August 2025 - December 2025*
 - Developed an AI-driven perception and control system for the F1TENTH autonomous racing platform using Jetson Orin Nano, ROS 2, OpenCV, and LiDAR with Docker, CUDA, and ZED stereo camera integration for real-time navigation.
 - Developed **SignSight**, a template-guided vision language framework for robust traffic sign recognition in autonomous vehicles using CLIP-based semantic reasoning and geometric template verification; **manuscript under review at CVPR 2026 (OpenReview)**.
- *Dr. Tapadhir Das* *January 2025 – May 2025*
 - Developed a three-phase AI pipeline combining sentiment analysis, toxicity detection, and account authenticity classification using XGBoost and LIME, achieving 96.9% accuracy.
 - Designed an end-to-end system linking comment sentiment with account-level risk profiling for bot, scam, spam, and real account detection; **paper under review at IEEE SMC 2026 (Conference Link)**.
- *Dr. Tapadhir Das* *September 2025 – April 2026*
 - Developed LIMFADD, an LLM-generated dataset for Instagram fake account detection, enabling classification into real, spam, scam, and bot categories with 97% accuracy.
 - Designed data collection and XAI-based validation pipeline; paper published at IEEE ISTAS 2025 **TechRxiv**.
- *Dr. Pramod Gupta* *March 2026 – May 2026*
 - Developed a RoBERTa-based emotion classification model on the GoEmotions dataset for 3-class sentiment (negative, neutral, positive), improving performance over baseline models.
 - Built **AIMoodDiary**, a full-stack AI journaling platform using Next.js and FastAPI with LLM-driven diary generation and mood analytics; **research manuscript under preparation**.

Graduate Teaching Assistant – University of the Pacific

- *Dr. Sethuraman Kuruvimalai* *February 2026 – May 2026*
 - Assisted in teaching a cybersecurity analytics course covering SOC workflows, SIEM, and Splunk, supporting assignment design and evaluation.
 - Guided students in Linux environments, virtual machines, and log analysis, improving hands-on investigation and reporting skills.

Selected Projects & Research

End-to-End Multi-Database Weather Data Engineering Pipeline *November 2025*

- Built an end-to-end weather analytics pipeline for Stockton, CA using Open-Meteo API, MongoDB, ClickHouse, and Redis, implementing incremental ETL with metadata lineage tracking and an Express + Chart.js dashboard for real-time monthly insights.

Pest Detection Using SVM *July 2022*

- Built an SVM-based pest detection system that preprocesses crop images and classifies infected vs. healthy tea leaves with high accuracy, enabling early pest identification for improved agricultural decision-making.

On-Tree Areca Nut Fruit Maturity Detection *December 2022*

- Developed a YOLOv5-based deep learning model integrated with DJI Mini SE drones to detect and classify areca nut maturity in complex backgrounds, optimizing harvest timing and improving yield estimation.
